UN issues new guidance to address warming in cities

- Prepared with RMI, the comprehensive guide prescribes proven strategies to achieve sustainable urban cooling, with scores of case studies
- Overheated cities face disproportionate climate costs due to 'heat island effect'; average city could warm as much as 4°C by 2100

Glasgow, 3 November 2021 – The UN Environment Programme (UNEP) today published detailed guidance to help the world's cities address warming, which is occurring at twice the global average rate in urban areas.

Beating the Heat: A Sustainable Cooling Handbook for Cities,
