

## Earth Air Tunnel

### About EAT

Earth air tunnel or earth air heat exchanger is a pre-cooling or pre-heating system which consists of a pipe or network of pipes buried at considerable depth below the ground surface. It either cools the air by rejecting heat to the ground or heats the air absorbing heat from the ground. It utilizes the fact that the deep earth temperature remains almost same as the annual average mean air temperature of the location.

# EarthAir

United Kingdom

EarthAir is a Passive Cooling System that uses underground pipes to cool and dehumidify incoming air.
